CLAIM AMENDMENTS

1-6 (Canceled)

7. (Amended) The implant assembly of claim 1 24 wherein at least one of the bone plate

and the fastener are formed of a biodegradable material.

8. (Canceled)

9. (Currently Amended) The implant assembly of claim 4 24 wherein the fastener is

formed of a polymeric material comprising homopolymers, co-polymers, and oligomers of

polyhydroxy acids, polyesters, polyorthoesters, polyanhydrides, polydioxanone,

polydioxanediones, polyesteramides, polyaminoacids, polyamides, polycarbonates, polylactide,

polyglycolide, tyrosine-derived polycarbonate, polyanhydride, polyorthoester, polyphosphazene,

polyethylene, polyester, polyvinyl alcohol, polyacrylonitrile, polyamide, polytetrafluorethylene,

poly-paraphenylene terephthalamide, polyaryletherketones, polyetherketones, cellulose, carbon

fiber reinforced composite, and mixtures thereof.

10. (Currently Amended) The implant assembly of claim 4 24 wherein at least one of the

fastener and the bone plate are formed of a polymer comprising monomeric repeating units

derived from d-lactic acid, l-lactic acid, glycolic acid, caprolactone, hydroxy buteric acid,

hydroxy valeric acid, and mixtures thereof.

PRELIMINARY AMENDMENT

4002-3361.JBM.232214

- 11. (Canceled)
- 12. (Canceled)
- 13. (Currently Amended) The implant assembly of claim 1 24 wherein the opening is an elongate opening.
 - 14. (Currently Amended) The implant of claim 4 24 comprising a plurality of openings.
 - 15-23. (Canceled)
 - 24. (Original) An implant assembly comprising:
 - a bone plate having at least one opening extending therethrough, and
- a fastener received within said opening and having a proximal head, a distal boneengaging portion, and a shaft therebetween, wherein at least one of the fastener and the bone plate include an adhesive to fixedly interengage the fastener to the bone plate.
- 25. (Original) The implant assembly of claim 24 wherein at least one of the bone plate and the fastener includes a pressure sensitive adhesive.
- 26. (Original) The implant assembly of claim 24 wherein the adhesive is selected from the group consisting of: epoxies, acrylates, cyanoacrylates, polyesters, polyolefins, polyurethanes, silicone adhesives, and mixtures thereof.

27. (Original) The implant assembly of claim 24 wherein the adhesive is a two-part

adhesive and wherein a first part of the adhesive is provided on the bone plate and a second part

of the adhesive is provided on the fastener, whereby contact of the bone plate with the fastener

combines the first part and the second part of the adhesive.

28. (Original) The implant assembly of claim 24 wherein the bone plate is flexible to

allow articulation of adjacent bone structures.

29. (Original) The implant assembly of claim 24 wherein the bone plate is configured to

connect adjacent vertebrae bodies.

30-33. (Canceled)

34. (Original) A method of fixedly securing a bone screw to a bone plate, said method

comprising:

surgically preparing bone tissue in need of repair for receipt of a bone plate;

placing a bone plate proximal to said bone tissue in need of repair, said bone plate having

at least one opening therethrough; and

inserting a bone screw through the at least one opening and into the bone tissue, wherein

at least one of the fastener and the bone plate include an adhesive to fixedly secure the fastener to

the bone plate.

PRELIMINARY AMENDMENT
Page 5 of 9

35. (Original) The method of claim 34 wherein the adhesive is a pressure-sensitive

adhesive.

36. (Original) The method of claim 34 wherein the adhesive is selected from the group

consisting essentially of: epoxies, acrylates, cyanoacrylates, polyesters, polyelefins,

polyurethanes, silicones, and mixtures thereof.

37. (Original) The method of claim 34 wherein said inserting comprises deforming a

portion of the bone plate or the fastener with a solvent.

38. (Currently Amended) The method of claim 34 comprising applying said adhesive to

either the fastener or the bone plate.

39. (New) The method of claim 34 comprising applying said adhesive to the bone plate.

40. (New) An orthopedic implant assembly comprising:

a bone plate comprising at least one opening therethrough; and

a fastener formed of a non metallic material and comprising a head and an opposite tissue

engaging portion, wherein said fastener is received through the at least one opening and bonded

to the bone plate.

41. (New) The implant assembly of claim 40 wherein the bone plate comprises a

metallic material.

42. (New) The implant assembly of claim 40 wherein at least one of the bone plate and

the fastener includes a pressure sensitive adhesive.

43. (New) The implant assembly of claim 42 wherein the adhesive is selected from the

group consisting of: epoxies, acrylates, cyanoacrylates, polyesters, polyelefins, polyurethanes,

silicone adhesives, and mixtures thereof.

44. (New) The implant assembly of claim 40 wherein the adhesive is a two-part

adhesive and wherein a first part of the adhesive is provided on the bone plate and a second part

of the adhesive is provided on the fastener, whereby contact of the bone plate with the fastener

combines the first part and the second part of the adhesive.

45. (New) The implant assembly of claim 40 wherein the fastener is solvent bonded to

the bone plate.

46. (New) The implant assembly of claim 40 wherein the bone plate comprises a first

polymeric material.

47. (New) The implant assembly of claim 46 wherein the fastener comprises a second

polymeric material that is intermixed with the first polymeric material of the bone plate.

48. (New) The implant assembly of claim 46 wherein the bone plate is flexible to allow articulation of adjacent bone structures.

49. (New) The implant assembly of claim 40 wherein the bone plate is configured to connect to adjacent vertebrae bodies.

50. (New) The implant assembly of claim 40 wherein the bone plate comprises a composite material.
